

Device for treating peritoneal dialysis patients

Name of College Banphue Industrial and Community Education College

Type of English Presentation Innovation and Invention Based on Research Methodology Contest

Abstract :	Peritoneal dialysis with a special solution to filter waste in the body by putting the solution into the abdomen and leaving it for a specified time. The solution will stay in the abdomen to filter the waste. And excess water from the abdominal cavity during the rest of the fluid in the abdominal cavity may take 4-6 hours to fill the solution through the pipe, which must be buried into the abdomen At the end of the scheduled time, it will release a solution that absorbs waste from the body and excess water from the abdomen. Takes about 30 minutes at a time
Features and Benefits :	Can delay the time of peritoneal dialysis And able to weigh peritoneal dialysis fluid 1. Able to follow up and treat dialysis patients 2. Can help patients dialysis on time Self help Can use everyday

Advisor
